

SIMPLY PUT....

Plug a programmed SlowBAUD into any 2 input, M12 connection on your robot End-Of-Arm Tool.

Pass those two robot inputs over to the PLC memory map.

Import the provided AOI and UDT into your ControlLogix project.

Connect the 2 inputs, the UDT and the AOI together in one rung of logic, and you will have up to 40 character serial string in your PLC to identify your tooling.

DETAILED INSTRUCTIONS ARE AVAILABLE ON OUR WEBSITE.
